

E.V. Wyant on grape culture

In 1925 the grape growers received an average of 22 cents a basket. The cost of harvesting and packing was about 9 cents a basket.

The packing cost of harvesting and packing is $3\frac{1}{2}$ cents to 5 cents a basket. The basket this year, 1926, cost $4\frac{3}{4}$ cents. If the grower gets 5 cents a basket over and above the cost of harvesting, packing and cost of basket, he can make money.

Average yield is 3000 to 4000 baskets an acre on ~~VIXXX~~ in vineyards four years old.
