INDUSTRIAL BRANCH OF

HEAD OFFICE, TACOMA, WASHINGTON
FIFTEEN BANKING OFFICES

THE INDUSTRIAL AREA

of Tacoma, Washington, lies at the head of magnificent Commencement Bay, one of the five finest natural harbors in the world.

Here, over two hundred plants, occupying approximately 1,000 acres and employing over eleven thousand people, are engaged in many diversified industries, including lumber, plywood, doors, furniture, pulp, paper, electrochemical, metallurgical, shipbuilding, steel and iron foundries, metal fabricating, pre-stressed concrete, railroad car shops, manufacture of fertilizer, food processing, flour and grain products, as well as many businesses to service these industries. On the Port piers are berthage for ocean-going vessels; vast storage space for lumber; transit sheds; buildings housing facilities for processing vegetables and fruit for sharp freeze; a modern facility for cold storage and sharp freezing; and a two million bushel capacity grain elevator. A fish boat haven and yacht basin are new additions to the Port properties. The U. S. Navy maintains a naval station, Naval and Marine Corps Reserve Training Center and large storage facilities in the area.

These industries are provided with power and water from the Tacoma City Utilities; Port of Tacoma marine terminal facilities capable of handling all types of cargoes; rail service with terminal facilities furnished by four transcontinental railroads—the Northern Pacific, C. M. St. Paul & Pacific, Great Northern and Union Pacific; a municipal belt line which provides terminal switching service for all of the railroads to the Port of Tacoma Industrial District, without switching charges on line-haul traffic; tug and tow boat service; more than 50 regular route motor freight carriers; and air service within half an hour's drive from the Port of Tacoma to the Seattle-Tacoma International Airport.

While the Industrial District is one of the most completely developed and largest industrial areas on the Pacific Coast, the Port of Tacoma has great plans for its further development. Nearing completion is the extension of the present Industrial Waterway for a distance of approximately three-quarters of a mile. 1,800,000 cubic yards of fill material is being utilized from the dredging to make more sites available for industry.

As the attached map indicates, the Port of Tacoma has 1,500 acres of industrial land available for future industries, truly a positive indication of the potential growth of the industrial area and of the City of Tacoma.
