WASHINGTON STATE POWER COMMISSION
1923 SMITH TOWER • 506 SECOND AVENUE
SEATTLE 4, WASHINGTON

November 3, 1954

NOTICE

Notice is hereby given of a meeting of the Washington State Power Commission at 2:00 P. M., Monday, November 8, 1954, in Pasco, Washington, at the Auditorium of the Franklin County Public Utility District.

While this is a regular meeting of the Commission, it will give an opportunity for people in the area to become familiar with the program of the Commission regarding power development in the State in general, as well as affecting the particular interest of the Tri-City area in the Priest Rapids development. In this connection, the Commission will take action on a memorandum of understanding between the Commission and Grant County Public Utility District #2. This agreement, in connection with the Federal Power Commission permit recently issued for the project, will permit engineering work to be undertaken during the coming winter season.

Other phases of the State's program, particularly affecting steam generation in the Northwest, will be discussed. Relation of this program to development of other projects on the Columbia River will be presented. Persons interested in the power development program and in various phases of the proposed development on the Columbia River are invited to appear at the meeting.

The afternoon meeting will follow a noon meeting of the Pasco Chamber of Commerce, at which members of the Washington State Power Commission will be guests of the Chamber.

J. Frank Ward
Managing Director
